

TEST

Mini AI Project Manager Assistant

PROBLEM STATEMENT

Create a tool that helps project managers by turning meeting notes or task descriptions into structured tasks, with deadlines and owners.

INPUT

- Paste meeting notes or task descriptions.

BACKEND

- Use an LLM to:
 - Extract tasks.
 - Infer deadlines and owners if mentioned.
 - Output structured JSON:
 - Task description.
 - Due date.
 - Owner.
 - Priority.
- Store tasks in a database.

FRONTEND

- List of tasks with filters (owner, status, priority).
- Edit task details.
- Optional: export to CSV.

EXPECTED OUTPUT**Tool where:**

- User pastes unstructured text.
- System produces structured tasks.
- User can manage tasks in a list.

At a glance

Test	Focus	Core AI task	Primary output
01	AI Project Manager	Extraction: notes → structured JSON	Filterable, editable task list
